PowerVM beats VMware in criteria that clients value most: performance, scalability, flexibility and integration

- Intended audience: Clients seeking entry-level Power Systems virtualization on fewer cores than are built into a POWER7 chip
- Solution: PowerVM can be licensed for less than four cores
 - For example, a client can license PowerVM on a single-socket server (with a four-core POWER7 chip) for just one, two or three cores
 - Does not force clients to pay for more than they need
- Note: PowerVM *must still be licensed for all active cores on a system*
- Business benefits
 - Creates more affordable entry point for new PowerVM prospects
 - Encourages broader deployment of virtualization on Power Systems

- New IBM Redbook:
 - Exploiting IBM PowerVM Virtualization Features with IBM **Cognos 8 Business Intelligence**
- Updated white paper:
 - A Comparison of PowerVM and VMware Virtualization Performance
- New white paper:
 - **Best Practices in Migrating** _ Linux/x86 Workloads to Power Systems with PowerVM
- PowerVM Flash Videos:

IBM Systems Director with VMControl: Management with Automation Integrated service management for simplified IT operations

Automated management, provisioning and optimization of physical/virtual servers and system pools ensure that your cloud resources are automatically provisioned for optimal utilization

Combines management functions into a single virtualization management tool

 ✓ Automated provisioning of standardized virtual images enable you to reduce deployment times from days to hours and reduces deployment errors

Improved manageability by combining multiple virtual resources into one manageable entity

Automated virtual image mobility within the system pool for optimal utilization and resilience

✓ **Optimizes virtual assets** within a system pool for performance, availability and energy use

VMControl Editions: Adds value to PowerVM

VMControl	VMControl Express Edition	VMControl Standard Edition	VMControl Enterprise Edition
Virtualization Capabilities	Manage resources	Automate virtual images	Optimize system pools

PowerVM Leads Oracle /Sun Virtualization

Virtualization capability	Sun Logical Domains 1.1	PowerVM Editions	PowerVM Business Benefit
Support across entire product line	Sun UltraSPARC T1/T2 servers only	All Power Systems servers	Standardize on one virtualization solution across an entire line of servers
Maximum Partitions	32(T1) 128(T2+)	1000	Consolidate more server workloads
Dynamic logical partitioning	Add/remove CPU Add-only virtual I/O	Yes	Adapt to changes without downtime
Support for live partition mobility	'Warm' migration with many constraints	Yes	Decrease downtime in your enterprise
Support for dedicated I/O	No	Yes	Superior performance for I/O intensive workloads
Cross-platform virtualization	No	Yes (Lx86)	PowerVM can consolidate workloads from four different platforms

¹⁷ Power your planet.

PowerVM Leads HP Virtualization

Virtualization capability	HP Integrity VM 4.0	PowerVM Editions	PowerVM Business Benefit
Partition scalability	8 CPUs (max) 64GB RAM	64 CPUs 4TB RAM	Helps improve TCO from consolidating more workloads
Dynamic logical partitioning	VM reboot	Yes	Adapt to changes without downtime
Security/fault isolation	No Certification	EAL 4+ Certified	Secured environment for mission critical applications
Support for dedicated I/O	No	Yes	Superior performance for I/O intensive workloads
Dynamic CPU sharing	No	Yes	Highly flexible configuration, with automatic deployment of resources where needed
Cross-platform virtualization	No	Yes (Lx86)	PowerVM is capable of consolidating workloads compiled for four different platforms

PowerVM provides the security customers demand for their mission-critical workloads

PowerVM has never had a single reported security vulnerability

Source: National Vulnerability Database, http://nvd.nist.gov/

"Making sure our website can't get hacked into is a key issue. With IBM, we have been able to keep it tightly locked up and prevent unauthorized access."

— Dr. Chris Yates, CIO Tennis Australia

Agenda

- PowerVM
- PowerVM vs the others
- PowerVM features

- Dynamically adjusts memory available on a physical system for multiple virtual images based on their workload activity levels:
 - Different workload peaks due to time zones
 - Mixed workloads with different time of day peaks (e.g. CRM by day, batch at night)
 - Ideal for highly-consolidated workloads with low or sporadic memory requirements
- Available with PowerVM Enterprise Edition
 - Supports AIX, IBM i and Linux workloads
- Blends Power Systems hardware, firmware and software enhancements to optimize resources
 - Supports over-commitment of logical memory
 - Overflow managed by VIOS paging device
 - Two VIOS partitions can be used for redundancy
 - Compatible with Live Partition Mobility

IBM

PowerVM Live Partition Mobility Improves Service Levels

Business and IT security and resiliency are as critical as ever, and must be dynamic and intelligent in order to match the speed of business change

- PowerVM Live Partition Mobility
 - Move running AIX and Linux partitions between systems

 Eliminate planned outages and balance workloads across systems

PowerVM Lx86 Accelerates Linux Workload Migration

- PowerVM Lx86 cross-platform virtualization runs unmodified Linux/x86 applications within VMs using Linux on Power
 - Copy x86 application binaries and run them no rewriting necessary
 - Run Linux/x86 workloads with AIX, IBM i and Linux on Power workloads
- Simplifies migration and virtualization of workloads from x86-based platforms to higher-performance Power Systems servers running Linux
- Provides a convenient 'bridge' to native compilation of Linux workloads
- Included with all PowerVM Editions

PowerVM: Virtualization without Limits A key decision point for your cloud environment

Enterprise QOS virtualization capability with **higher performance**, **more scalability**, and **enterprise security** provides the best foundation for your cloud

Drive systems to over 90% utilization

 Live Partition Mobility with VM's of any size up to the entire system that can easily move between your POWER6 and POWER7 systems

Scales seamlessly from 1/10 of a core to 256 cores and can use all resources of the host server

✓ Dynamic changes to any IT resource without reboot

 Integrated storage virtualization for simplified provisioning and management of virtual servers

✓ Secure by design with Zero common vulnerabilities exposures (CVEs) reported against PowerVM by <u>US CERT</u> or by <u>MITRE Corporation</u>.

*All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only. Some features require the purchase of additional software components.

... align needs to manage both virtual and physical systems

Positive Feedback: Analyst commentary on PowerVM

For Infrastructure & Operations Professionals

August 27, 2010

Q&A: Impact Of IBM's POWER7 And PowerVM On Workload Optimized Systems Design PowerVM Is A Critical Advantage For IBM's Power Systems by Brad Day with Robert Whiteley and Lauren E. Nelson

EXECUTIVE SUMMARY

IBM's POWER7 system — arguably the most dramatic server design development since the first POWER4 dual-core microprocessor architecture — makes advanced virtualization stacks a core differentiator in creating next-generation workload-optimized systems architecture. However, for many I&O professionals, the feature and functions of microprocessors and/or microarchitectures won't be enough to put advanced virtualization stacks like POWER7 on their purchasing shortlists. Instead, you should seek the benefits of a balanced systems architecture design. IBM's clear leadership position in the traditional Unix area — coupled with its more advanced PowerVM virtualization stack — will continue to be the core reason to adopt IBM technology. The PowerVM stack also gives POWER7 advantages over other hypervisor-based systems alternatives and, most importantly, the ability to equally support complex, mixed-application workloads across multiple operating systems. And finally, another key component of short-listing POWER7 will be attacking the I&O objective of lowering the life-cycle costs in owning an enterprise computing footprint.

QUESTION

- 1. What metrics should be used to measure advanced virtualization architectures?
- 2. What are the primary benefits of PowerVM running on Power Systems?
- 3. Which version of System Director's VMControl product is right for me?
- 4. What aspects of the new POWER7 systems functionality leverage PowerVM?

POWER7 AND POWERVM IMPROVE IBM'S POSITION IN THE VIRTUALIZATION MARKET

IBM's Power Systems server continues to evolve. It differentiates from distributed x8s and other RISC and Itanium 2 architectures with sustained advantages in scalable availability and scalable performance. Over the past three years, IBM made large strides with the convergence of System i and System p and the lure of successfully attracting Linux ISVs. With the introduction of POWER7, IBM made another significant leap in big-iron balanced systems design and the continued innovations around the PowerVM virtualization stack. Power Systems is retaking center stage with enterprises traditionally favoring Unix but whose objective may also include the consolidation and virtualization of both Linuxand Unix-led applications. It's a single server system design that can also offer an advanced virtualization stack in support of a more varied and mixed set of applications workloads — making virtualization the key ingredient in creating a more workload-optimized balanced systems architecture. And finally,

FORRESTER Forester Research, Inc., 400 Technology Squark, Cambridge, AM, 021 85 USA Tat-1-1 ET7, 512 5000 - Fani-1-512-513,5000 - WWW/Intrastity.com

- "IBM's clear leadership position in the traditional Unix area — coupled with its more advanced PowerVM virtualization stack — will continue to be the core reason to adopt IBM technology. The PowerVM stack also gives POWER7 advantages over other hypervisor-based systems alternatives and, most importantly, the ability to equally support complex, mixedapplication workloads across multiple operating systems."

AIX V7 and PowerHA V7

Power your planet.

Power System Software highlights

AIX 7: The most scalable UNIX, new runtime management and compliance features

PowerHA: Integrated with cluster aware AIX; New Director management and Smart Assist application agents

i Solution Editions: Save on configurations for leading ERP apps

Linux: Easy installation or preload, boost Linux application performance 20% with IBM Advanced Toolchain, and simplify image management with Linux containers

Systems Director 6.2: new availability and security features including Linux support for automated virtual image management, provisioning and relocation

30

IBM Power Systems

Reliability: *The fewest unscheduled outages*

Availability: The least amount of downtime

15 minutes a year (99.997% uptime)

More than 10X better than Windows

Less than one outage per year

11 minutes to apply a patch

Corporate Enterprise Downtime (Hours per Year)

AIX & Power Systems delivers the best reliability of UNIX, Linux, and Windows

54% of IT executives and managers say that they require 99.99% or better availability for their applications

Power Systems with AIX deliver 99.997% uptime

What we are announcing

AIX 7 – The Future of UNIX

• AIX 5.2 Workload Partitions for AIX 7

- A new way to consolidate older workloads on POWER7

AIX 7 – the future of UNIX

Virtualization without limits

 Run AIX 5.2 WPARs¹ to consolidate & lower cost of critical business applications on POWER7

Resiliency without downtime

 Built in clustering simplifies configuration and management, plus provides a foundation for PowerHA solutions

Data protection and compliance

- Extended administrator options for role based access control
- Designed for deployments requiring CAPP/EAL4+ certification

Management with automation

Simplified profile based configuration management²

¹Requires "AIX 5.2 WPAR for AIX 7" product ²Requires IBM Systems Director

³³ Power your planet.

AIX 7 Hardware Enablement and Support

- Terabyte Segment support
 - Designed to improve performance for workloads that use large amounts of memory
- AIX kernel memory pinning
 - AIX 7 memory pinned by default to enhance performance
- Hardware acceleration for Encrypting Filesystems, IPSec and Trusted Execution
 - Reduce processor workload for encryption
- LVM Solid State Disk Support
 - SSD only VGs, enhancements to filemon to identify SSD candiates
- Shared Memory interface to Barrier Synchronous Register

- Reduce need for kernel extensions for BSR access

WPAR Enhancements

Export of Fibre channel adapters to WPARs

- NPIV-like, but can work on any Fibre Channel adapter
- Adds support for Fibre Channel tape

Kernel Extensions for WPARs

- Trusted kernel extensions may be loaded by the WPAR administrator
- Extensions can be only for one WPAR or for entire system

Support for VIOS disks in WPARs (also in AIX 6.1 TL6)

– Long requested feature

AIX 5.2 Workload Partitions for AIX 7

- Reduce business risk with ongoing support for AIX 5.2
 - Phone support, plus patches for critical security and data integrity problems
- Lower infrastructure costs for critical business applications
 - Consolidate AIX 5.2 workloads on latest POWER7 servers and blades
- Set the right technology upgrade strategy for your business
 - Exploit the lower costs of POWER7 now, and plan for AIX 7 when ready
- Simplify application consolidation and management
 - Back up existing AIX 5.2 partitions and restore them into a WPAR on AIX 7

AIX 5.2 WPARs for AIX 7

How does it work?

- Client simply backs up existing legacy AIX 5.2 environment and restores into an AIX 7 WPAR
- The AIX 5.2 environment including rootvg filesystems are preserved and restored
- Client applications continue to run in AIX 5.2 environment with AIX 5.2 libraries
- The kernel environment will be AIX 7
 - SMT4, MicroPartitioning and VIOS are supported!
- The SWMA for this offering will also provide how-to and limited defect support for the AIX 5.2 operating system
- Managed via IBM Systems Director Workload Partitions Manager or command line

*All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only. Some features require the purchase of additional software components.

AIX 5.2 WPARs for AIX 7 is a separately charged product built on AIX 7

Cluster Aware AIX

Designed to simplify construction and management of clusters of AIX systems for scale-out computing and high availability

- Easily create clusters of AIX instances for scale-out computing or high availability
- Designed to:
 - Significantly simplify cluster configuration, construction, and maintenance
 - Designed to improve availability by reducing the time to discover failures
 - Capabilities such as common device naming help simplify administration
 - Built in event management and monitoring
- A foundation for future AIX capabilities and the next generation of PowerHA SystemMirror

Cluster Aware AIX Exploiters

- RSCT and Cluster Aware AIX together provide the foundation of strategic Power Systems SW
- RSCT-CAA integration enables compatibility with a diverse set of dependent IBM products
- RSCT integration with CAA extends simplified cluster management along with optimized and robust cluster monitoring, failure detection, and recovery to RSCT exploiters on Power / AIX

IBM

AIX 7 Profile Manager (Formerly AIX Runtime Expert)

Systems Director plug-in that is designed to simplify consistent AIX configuration across multiple systems

Simplified configuration using the AIX Profile Manager

AIX Role Based Access Control (RBAC) with Domains

What is it?

 A capability of AIX that allows privileged administration tasks to be delegated to non-privileged users

 Access to system resources are associated with roles that are assigned to non-privileged users

 Many roles are predefined which can reduce the effort of implementing RBAC

 Roles can also be associated with programs

 Domain access can further limit administrators to only work with resources for a particular organization (AIX 7)

How it can help?

•Can reduce the cost and complexity of security administration by allowing secure delegation of administrative tasks to non-privileged users

•Enables a more secure IT infrastructure by reducing the need for so many privileged administrators

Assigning roles to programs can reduce the need for security exposures such as the use of setuid for programs

 Allows for new ways to delegate administration duties between system administrators and nonadministrative users

Domain support Provides more granularity for multi-tenant IT shops

AIX & Power Systems Security Certifications

Flexible AIX Editions match the needs of mid-sized companies and large enterprises

Express Edition

- For blades, entry servers, small workload consolidation
- Scales up to 4 cores per VM, 8GB of memory per core

Standard Edition

- Industry leading UNIX for the most demanding workloads
- Scales up to 256 cores, unlimited memory per core
- ✓ AIX 7 includes Cluster Aware AIX and AIX Profile Manager

Enterprise Edition

- Industry leading UNIX with integrated management tools
- Enterprise management tools with IBM Systems Director
- ✓ Virtualization with Workload Partitions Manager[™] for AIX

Why should you move up to AIX 7 or AIX 6?

- More performance on POWER7
 - AIX 7 and AIX 6 can provide substantially more performance on POWER7 than AIX V5.3
 - AIX 7 supports massive workloads with up to 256 cores / 1024 threads
- Access to new features
 - Capabilities like WPARs, Role Based Access Control, AIX Profile Manager are designed to improve security and administrative efficiency
- AIX V5.3 is nearing End of Life
 - End of Marketing announced effective April 2011
- AIX 7 will support running AIX 5.2 in a WPAR
 - Excellent way to consolidate old workloads running on less efficient hardware
- It's FREE!
 - Customers with software maintenance agreements (SWMA) can upgrade for no additional charge within an Edition:

AIX 5.3 to AIX 7 Standard edition

AIX 6 Express Edition to AIX 7 Express Edition, etc,

PowerHA SystemMirror for AIX Highlights

PowerHA SystemMirror 7.1 Standard Edition

- Integrated with cluster aware AIX
 - HA solution for administrative simplicity
- New director based management interface
 - For simple centralized multi-cluster management
- New Smart Assists application agents
 - Out of the box deployment for SAP and other popular applications

PowerHA SystemMirror 6.1 Enterprise Edition

- IBM DS8000® Metro Mirror, SVC Metro Mirror & Global Mirror, EMC SRDF
- Adding support: for Hitachi Truecopy and IBM DS8700® Global Mirror

IBM intends to enhance PowerHA SystemMirror Enterprise Edition to exploit AIX cluster aware technologies.

All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice.

PowerHA SystemMirror 7.1 Standard Edition

Simpler to deploy and easier to manage with IBM Systems Director, intuitive interfaces, cluster and resource group wizards, management dashboards and Smart Assists for SAP and other popular applications Out of the box support for, DB2, WebSphere, Oracle, SAP, and TSM, Enterprise Content Manager, LDAP, IBM HTTP

Minimize IT operations with cluster aware AIX; cluster wide AIX commands, kernel based event management, device naming, central repository and multi-channel communications

Robust cluster integrity with disk fencing and multi-channel heart beat which automatically uses available I/O including SAN.

Complete end to end failover automation with policy driven resource group relationship sequencing

IBM Director: PowerHA Management Interface

State-of-the-art interface

- No charge plug-in
- Masks complexity
- Central management
- Real-time status
- Smart Assist integration
- Deployment wizards

PowerHA SystemMirror

PowerHA SystemMirror 7.1 Standard Edition represents the next generation of solutions for High Availability.

- Cluster Aware AIX for kernel based HA technology
- ✓ Director based management for simple, centralized cluster administration
- Smart Assists for out the box HA deployment of SAP and other popular applications
- Multiple redundant heartbeat with SAN communications for robust cluster integrity
- Advanced resource group policies for automated recovery sequencing

PowerHA SystemMirror 6.1 Enterprise Edition expands storage options for multi-site HA/DR

- IBM DS8000® Metro Mirror, SVC Metro Mirror & Global Mirror
- IBM DS8700® Global Mirror
- EMC SRDF
- ✓ Hitachi Truecopy

PowerHA SystemMirror 7.1 Standard Edition

Feature	Function	Benefit	
Director Based Graphical User Interface	Wizards for cluster deployment and application health management Graphical Topology Management Resource change notification Report generation	Simple centralized multi-cluster management	
PowerHA SystemMirror Cluster Aware AIX	Kernel based: Multi cast heat beat Centralized cluster repository Real time event notification Last gasp broadcasting	Early warning of pending failure Near real time failover Not prone to OS scheduling issues	
Heartbeat	Triple redundant heart beat: SAN based communication Discovery based deployment	Easy set up Not prone to OS scheduling issues Minimize split brain scenarios	
New Storage Framework	Host and device level fencing Strict control of shared disk access Kernel based event management	Prevents data corruption due to unauthorized access Real-time I/O driver monitoring	
Resource group relationships	Start after Stop after	Insures proper sequence for starting and stopping dependent resource groups in cluster	

PowerHA SystemMirror 7.1 Standard Edition

Feature	Function	Benefit	
Adaptive resource group policies	Start up (1 st , home, all active) Fail over (prioritization policy) Fall back	User defined failover policies	
Root Vg monitoring/event processing	HA coverage for root Vg storage	Automated failover includes all volume groups in cluster	
Custom resource management	Custom resource can be plugged into resource group	Customer can monitor and define sequencing of custom resource	
Smart Assists	Discovery	Out of the box deployment	
	HA Management	Scripts for start, stop and monitoring	
	Environment verification	Application health checks in addition to cluster health monitoring	
New Smart Assists	SAP, Enterprise content manager, Oracle, DB2,Websphere, TSM, IBM HTTP, printers, IBM LDAP	Popular middle ware applications	
Smart Assist for SAP	Support for: ABAP and J2EE environments DB2, Oracle or MAXDB databases LiveCache (MAXDB) based fast failover	Supports popular SAP configurations Allows for customization	

Thank you !

Special notices

This document was developed for IBM offerings in the United States as of the date of publication. IBM may not make these offerings available in other countries, and the information is subject to change without notice. Consult your local IBM business contact for information on the IBM offerings available in your area.

Information in this document concerning non-IBM products was obtained from the suppliers of these products or other public sources. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. Send license inquires, in writing, to IBM Director of Licensing, IBM Corporation, New Castle Drive, Armonk, NY 10504-1785 USA.

All statements regarding IBM future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

The information contained in this document has not been submitted to any formal IBM test and is provided "AS IS" with no warranties or guarantees either expressed or implied.

All examples cited or described in this document are presented as illustrations of the manner in which some IBM products can be used and the results that may be achieved. Actual environmental costs and performance characteristics will vary depending on individual client configurations and conditions.

IBM Global Financing offerings are provided through IBM Credit Corporation in the United States and other IBM subsidiaries and divisions worldwide to qualified commercial and government clients. Rates are based on a client's credit rating, financing terms, offering type, equipment type and options, and may vary by country. Other restrictions may apply. Rates and offerings are subject to change, extension or withdrawal without notice.

IBM is not responsible for printing errors in this document that result in pricing or information inaccuracies.

All prices shown are IBM's United States suggested list prices and are subject to change without notice; reseller prices may vary.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

Any performance data contained in this document was determined in a controlled environment. Actual results may vary significantly and are dependent on many factors including system hardware configuration and software design and configuration. Some measurements quoted in this document may have been made on development-level systems. There is no guarantee these measurements will be the same on generally-available systems. Some measurements quoted in this document may have been estimated through extrapolation. Users of this document should verify the applicable data for their specific environment.
